

Orthomolecular Medicine in China and Medical cooperation between China and Japan

Dr. Li Li, MD.

李 莉

Orthomolecular Medicine is a brand new medicine in China. Due to the significant effect for people's health, with great help from Japanese teachers, I tried to bring this medicine into China. Getting qualification, under guidance of experts, we practiced orthomolecular Medicine case by case, helping 300+ patients.

Medical cooperation between China and Japan, starting in orthomolecular medicine, then we invite brilliant experts from various fields joined us. They shared advanced medicine and helped patients in Preemptive and Integrative Medicine, Oncology, Immunotherapy and Cell therapy, Neurosurgery, Plastic surgery, Cosmetic Medicine, etc. At the same time, Japan-China international tele-consultation platform come into being.

With multiple speeches, academic communications, conference, knowledge popularization, paper publish, and even report to the government, the advanced medicine of our team, is attracting widespread attention in both Japan and China.
